Presenter

Mike Rosen is Chief Scientist at Wilton Consulting Group providing advice to CIOs,

IT Leaders, and Architects on creating the new Digital Business Platform, using architecture as a tool for digital transformation and improved decision making. He is also a Founding Member and VP of the Business Architecture Guild. Mr. Rosen has more than 35 years of technical leadership experience architecting, designing, and developing solutions, applications, and products. He was previously CTO at startup AZORA Technologies and chief architect, product architect, technical leader, and developer for commercial middleware products from IONA, BEA and Digital. Mr. Rosen is a well-known international speaker and author of 3 books and hundreds of articles.

Overview

Is your organization planning, initiating or undergoing a digital transformation initiative? Then you know how important architecture and technology is to building a sustainable foundation. Yet so much has changed in the past 2 or 3 years that it's hard to know what that should look like anymore. The environment is now part of a larger business ecosystem. Scale, speed and scope are greatly expanded. Business architecture is different. Information and data architecture are different. Application architecture is different. Technology architecture is different. Security architecture is different. And, how they all fit together is different too. This workshop answers two key questions:

1. What does architecture for digital transformation look like?
2. How can you keep up to speed on all the changes that implies?

This workshop briefly explores the requirements for the new digital economy, and then describes the new "Digital Business Platform" necessary to meet those requirements and sustain success. Continuing from there, it lays out the overall architecture needed to create that platform and goes into detail about the new business, information, application, technology, performance, and security architectures that comprise it. A detailed case study is woven throughout the workshop to illustrate the platform, architectural tradeoffs, and a wide variety of work products across all domains. Interactive exercises will give attendees an opportunity to use the new techniques in real time.

Learning Objectives

- How the Digital Economy requires a new platform and architecture
- The overall architecture for the "Digital Business Platform"
- How to use business architecture to evaluate and plan digital transformation opportunities and options and shape the platform requirements
- The new information and data architecture to support an intelligent core and the 'sense, compute, act' paradigm and typical usage patterns that drive tradeoffs.
- Performance architecture for providing real time reporting on key enterprise business outcomes
- Application architecture in the era of microservices, containers, APIs, DaaS, FaaS, PaaS.
- Cloud and hybrid technology architectures for a sustainable, scalable, reliable flexible business platform.
- Security architecture to ensure Digital Trust, including Intelligence AI, and SECaaS.

Course Outline

What is Digital Transformation?

- Digital Transformation Defined
- Four Dimensions of Transformation - Business Model, Operating Model, Information, Technology

Sense, Compute, Act

- The New Application Paradigm
- Application Examples

Business and Operating Models and Strategies

- Digital Business Models
- Digital Operating Models
- Evaluating Opportunities

Architecting the New Digital Business Platform

- Intelligent core, Integration, Development, Engagement
- The new architecture framework
- 5 S's of architecture transformation

Business Architecture

- BA overview
- Articulating strategies
- Capability framework

Case Study

- Planning strategy to execution
- Value based planning

Performance Architecture

- Outcomes, Critical Success Factors, KPIs
- Business Motivation Model
- Performance framework

Information Architecture

- Decision Centric Computing
- Cognitive approaches - AI, ML, DL
- Data lakes
- Data patterns

Application Architecture

- Microservices, services, and APIs
- CaaS, FaaS
- PaaS
- DevOps
- Rationalization and Technical Debt

Technology Architecture

- Hybrid solutions
- Cloud transition strategies
- Integration

Security Architecture

- State of cybersecurity
- Four disciplines of security management
- Security economics
- Digital trust
- GDPR
- Blockchain

Audience

Attendees should have an understanding of Enterprise Architecture and a familiarity with a variety of architectural model and deliverables.

- Enterprise Architects
- Business Architects
- Information Architects
- IT Architects
- Business Analysts
- Strategic Planners
- Business Leaders
- IT Executives
- Anyone else concerned with designing and sustaining an agile digital transformation

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

BizOps - Integrating Architecture, Business Analysis, DevOps, Lean and Agile

Michael Rosen

Overview

Is your organization planning to, or already underway with Agile development and / or DevOps? Does it seem like an excuse not to do architecture, analysis or design, because it shouldn't be. At a project level, you're building things faster, but at an enterprise level, you don't know if you're building the right things, or instead, just creating redundancy and inconsistency faster. While speed is important, it is the right things at the right speed – the "speed of business change" – that is critical to success in the new digital economy. And, while DevOps is a critical component of any business or digital transformation initiative it is not incompatible with, in fact it is better with, architecture and design. Moreover, the enterprise benefits don't end there.

BizOps extends the continuous feedback, faster cycle time, and tighter integration atmosphere, mindset, and process of Lean, Agile, and DevOps, "development-to-operations" upstream to include "business-to-development-to-operations" creating alignment with strategy while ensuring flexibility and agility. This includes a business driven "intentional architecture" and common vision that enable innovation, rapid change and emergent business design.

This interactive seminar will mix presentations and simulation planning exercises to answer three key questions:

1. How does BizOps improve delivery and speed of business change?
2. How can you successfully integrate business and enterprise architecture into your DevOps and Agile environments?
3. How do architecture, analysis, design, and development activities change to take advantage of the best of both worlds?

Learning Objectives

- What is BizOps
- How to scale DevOps
- What are the core principles of Agile and Lean that must be scaled
- How architecture and Agile practices complement each other
- How to create an "intentional architecture" using DevOps
- How to extend DevOps to BizOps using business architecture and analysis
- How to fit architecture and analysis into a CD/CI and test-driven environment
- The new role of architects and business analysts

Course Outline

What are BizOps and DevOps?

Agile and Lean Principles

- Shorter cycles, continuous feedback, smaller batches, lower transaction cost, faster cycle time, test driven, tighter integration...

Scaled Agile Approaches

- SAFe
- Scaled Agile

Architecture, Analysis and Design in the world of DevOps

- Opportunities
- Benefits
- Challenges

Fitting Architecture into Scrum

- Creating 'enabling' stories
- Managing the backlog
- Defining 'done'
- Daily standup

Workshop Part I: Architecture and Analysis at the Team Level

Creating an 'Intentional Architecture'

- Architectural enablers
- Shared vision
- Individual responsibility
- Clarity and competence

Workshop Part II: Architecture and Analysis at the Program Level

Business Architect and Analysis helps Agile Scale

- Extending SAFe roles
- Defining Release Trains
- Business Capabilities influence Features
- Value Streams influence backlogs and priorities
- Portfolio concerns

Workshop Part III: Architecture and Analysis at the Portfolio Level

Architecture and Testing

- Test-driven development
- Automated testing
- Continuous Integration

Getting Architects and Analysts to "Think Agile"

New Roles and Responsibilities

- Architects
- Analysts
- Agile / DevOps leaders
- Developers

Conclusion

Audience

Audience Skill Addressed: All levels. Attendees will gain an understanding of how all the different techniques fit together. Attendees with exposure to Agile and DevOps will be able to quickly apply the learnings to their organizations.

- Enterprise Architects
- Business Architects
- IT Architects
- Application Architects
- IT managers
- Agile leaders and developers
- Business Analysts
- participants in DevOps

Presenters

John Zachman is the originator of the "Framework for Enterprise Architecture" which has received broad acceptance around the world as an integrative framework, or "periodic table" of descriptive representations for Enterprises.

Cort Coghill, is a Director of FEAC Education Operations. He is also one of the very few Zachman Certified - Enterprise Architect Educators (Level 3) in the world, setting Cort apart as one of the foremost experts on the Zachman Framework, in both education and project work.

"Lots of energy and enthusiasm. Passionate."

Simon Bathie, Group IS Programme Plan Manager, MBDA UK

"The enthusiasm, energy and breadth of experience remain, as ever, infectious and mesmerising. This week has been money very well spent."

Rob Austen, Managing Director, Austen Consultancy Services

"Excellent first hand explanation. Very powerful."

Marco van Leeuwen, Process Architect, Van Lanschot Bankiers

Overview

Enterprise Architecture is fundamental for enabling an enterprise to assimilate internal changes in response to the external dynamics and uncertainties of the information age environment. It not only constitutes a baseline for managing change, but also provides the mechanism by which the reality of the enterprise and its systems can be aligned with management intentions. This four day seminar and workshop, based on the Zachman Framework V3.0, incorporates actual modelling experience. The modelling workshop is based on actual Enterprise experience and is designed to give the participants hands-on experience creating both "Primitive" (architecture) models as well as "Composite" (implementation) models. The course will prepare the participants for both levels of the Zachman Certified - Enterprise Architect program: Zachman Certified™ - Enterprise Architect Associate (Level 1) and Zachman Certified™ - Enterprise Architect Professional (Level 2). The certification fee (both Level 1 & Level 2) is included in the registration fee. The "Zachman Certified - Enterprise Architect" examination, is a two hour, on-line examination that upon passing, results in the award of Enterprise Architect Associate (Level 1) Certification. This examination can be taken any time after the course. Delegates will then subsequently be awarded the Enterprise Architect Associate (Level 2) Certification upon submitting a case study. This is a very exclusive certification program. If you want to understand the "Complexity & Contradiction" in Enterprise Architecture and are struggling to manage a non-adaptive enterprise and dysfunctional systems, this will be an important experience!

Learning Objectives

- A sense of urgency for aggressively pursuing Enterprise Architecture
- A comprehensive definition (description) of Enterprise Architecture
- Differentiation of Enterprise Architecture from Systems Implementation
- Creating Enterprise Strategy Models which form the basis for Enterprise Architecture
- Differentiation of Ontology from Methodology
- Utilizing Enterprise Architecture for operational decision making
- A strategy for reducing "time-to-market" for systems implementations to virtually zero
- Strategy for integration beyond jurisdiction (Interoperability)
- Architectural Principles for meeting enterprise requirements
- Ensuring traceability across the artifacts for impact analysis and change management
- BPM, SOA, BI, MDA, ITIL, etc. in the context of the Zachman Framework
- Row by row modelling of the Zachman Framework inside the tool
- Case study decision making and model analysis inside the tool

Course Outline

Setting the Context for Enterprise Architecture (EA)

- Contribution of IT People to an Information Age Enterprise
- Global Environment: Escalating Complexity and Escalating Change
- Applying the Concept of Mass-Customization to the Enterprise

Introduction to Enterprise Architecture (The Zachman Framework V3.0)

The Zachman Framework is perhaps the most referenced in the industry. This session provides participants with a unique opportunity to learn first-hand about its concept and utility, directly from the man who developed it. The just released V3.0 will be discussed.

- Definition of Enterprise Architecture
- The Zachman Framework - Architecture Is Architecture Is Architecture
- Ontologies Versus Methodologies

Workshop: What's Wrong with My Architecture?

Workshop: Creating Enterprise Strategy Models Using Row 1 Primitives

Case Study: Creating Composite Strategy Models Using Business Motivation (BMM) and Balanced Scorecard

Enterprise Engineering

- Models from My Bookshelf - 75 years of experience (Implementation, Composite Models)
- The Elegance of Primitives (Their essential contribution)

Audience

- CIOs
- Enterprise Architects
- Chief Architects
- Business Architects
- IT Architects
- Process Architects
- Application Architects
- Solution Architects
- Software Architects
- Technology Architects
- Data Architects
- Business Analysts
- System Analysts
- IT Strategists
- Business Strategists
- Strategic Planners
- Program Managers
- Information Systems Management
- Business Process Managers
- Data, Applications, Technology Management
- Consultants

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Advanced Portfolio Management: From Projects-Driven to Goals-Driven Investment in Change

Chris Potts

Overview

Organisations that excel at investing in change use a goals-driven portfolio. They prioritise their goals, invest more in their priority goals, and choose projects that can achieve those priorities with the lowest-possible risks and resources. This intensive and interactive workshop focuses on how to design and use a goals-driven portfolio, transform from a projects-driven investment culture, and multiply the value of your organisation's Portfolio Management capabilities – Portfolio Managers, Architects and Business Analysts.

A goals-driven portfolio is essential for making agile investment decisions. As rapidly as the market changes, and today's projects vary in their probabilities of success, executives and portfolio managers can re-appraise the enterprise's investment choices. They can decide what to keep the same in the portfolio and what to change – to achieve their goals at the speed they need to achieve them, and for the risks that they are prepared to take.

There are four generations of Change Portfolio. The first generation is projects-driven and resources-constrained, focusing the organisation on its implementation goals, budgets, and other resource limits. Progressively, the focus of the portfolio becomes the enterprise's investment goals, the probability of achieving them, and the total risks taken.

The value of Portfolio Management multiplies with each new generation of portfolio. A portfolio is more than the sum of its individual projects: portfolio managers know and track the up-to-date investment goals, total risks and resources, and probabilities of the portfolio succeeding. They highlight and deal with gaps in the portfolio, where there are insufficient projects to achieve the goals, allocate provisions for future investment priorities, and ultimately lead the organisation's strategy for investing in change.

Learning Objectives

- Benchmark the maturity of your Change Portfolio
- Design and use a goals-driven portfolio
- Recognise and transform a projects-driven investment culture
- Make agile and efficient investment choices
- Multiply the value of your Portfolio Management capabilities

Course Outline

Achieving success at investing in change

- The two fundamental strategies
- Applying investment principles to business change

The Four Generations of Change Portfolio

- From implementation goals and resources, to investment goals and risks
- Which generation is your current portfolio?

Diagnose your organisation's Investment Culture

- Why understanding culture is essential for success
- Your organisation's personality and maturity as an investor in change

Design a goals-driven portfolio

- Projects-driven or goals-driven: how to tell the difference
- Create a goals-driven portfolio design, for your enterprise and culture

Transform your projects-driven portfolio

- Reveal all-new knowledge from existing projects data
- A technical, political and cultural journey

Make agile and efficient investments

- Embed agility in the portfolio, and in the selection of investments
- Minimise the total risks and resources

Track up-to-date portfolio performance

- Target outcomes, probabilities and actuals
- Goals-driven portfolio governance

Multiply the value of your Portfolio Management

- Core capabilities of goals-driven portfolio managers
- From informing to supporting, through facilitation to leadership

Audience

Advanced Portfolio Management is a course designed especially for people who are essential to the success of your investments in change:

- Portfolio Managers and Portfolio Management Office leaders
- Enterprise Architects
- Business Architects
- Senior Business Analysts
- Consultants specialising in Portfolio Management or Enterprise Architecture

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Presenters

Roger T Burlton is the co-founder of BPTrends Associates, founder of Process Renewal Group and the author of 'Business

Process Management: Profiting from Process'. He is considered an industry leader in the introduction of innovative approaches for organizational change. To date, he has conducted over seven hundred seminars and has presented to over fifty thousand professionals. His seminars have been translated for diverse audiences around the globe.

This course, Business Architecture, is a course endorsed by the IIBA and registered under BPTrends Associates, an IIBA Endorsed Educational Provider. The course is aligned with the BABOK v2.0. Attendees will earn 24 PDs (Professional Development) hours or 24 CDUs (Continuing Development Units) for attending this course.

Overview

Quick and effective business change means that Business Architects must know the interconnections among business elements so that as the business model is updated, they can identify what's impacted and design with deliberate integrity and reuse in mind. A solid business architecture that assures the avoidance of redundancy, maximizes the sharing of capabilities and makes best use of supporting resources, is essential. With a sound architectural foundation, business-wide transformation, digitalization and continuous optimization can be accomplished and change efforts can progress smoothly. This is a highly participative workshop and will delve into all aspects of Business Architecture, as defined by the **Business Architecture Guild's BIZBOK** along with other established and new methods, leaving the participant with the skills required to make Business Architecture disciplined, repeatable and yet practical.

Learning Objectives

- Understand what a straight forward and useful Business Architecture looks like
- Learn how to implement the concepts and practices of the **BIZBOK**
- Understand what outputs the business produces and how it delivers them to create value for its customers and other stakeholders (**Business Model**)
- Define how the business is organized and how it operates in the context of broader business ecosystems (**Operating Model**)
- Align what investments in resources the business should make (**Resources Model**)
- Learn to build information, capability and process architecture models and interconnect them through a business performance lens
- Be able to use the architecture to accelerate change projects and deliver breakthrough digital technologies

Course Outline

Why Business Architecture?

- Enable Transformation, Disruption and need for Innovation
- Requirement for Business Agility

Business Architecture and Related Disciplines

- Zachman, TOGAF
- BIZBOK
- The Business Architecture Landscape

Workshop: What is your Architecture maturity and readiness?

Architecture Scoping and Value Chain Identification

- Whole company or one Value Chain?
- Intercompany Value Chains?

Workshop: What Value Chains do you have and what's in scope for Business Architecture?

Business Strategy Understanding

- Business Ecosystem Analysis: Uncertainties, Scenarios, Opportunities and Threats
- Stakeholder Context Model: Item exchanges
- Stakeholder Value Proposition: Expectations and Experience Assessment, KPIs and Objectives
- Business Motivation Model: Ends before Means

Workshop: Who are your stakeholders and what is of value to them?

Framing the Strategy for Business Architecture Consumption

- Building your 'North Star': Goals and Objectives
- Establishing Strategic Capabilities and Requirements
- Choosing your Architecture scenario and plan of attack

Workshop: What are the Critical Capabilities and Requirements for the Business Architecture?

Business Object/Concept Modeling: The Basis for Information, Capability and Process Architecture Models

- Business Objects
- Concept Model
- Business Vocabulary
- Deriving the Information Model

Workshop: What is your Business Object/Concept Model?

Audience

This course will be of benefit to professionals and managers of all types involved with planning and designing organizational change and building business capability to adapt and innovate continuously.

- Business Architects
- Business Analysts
- Process Architects and Analysts
- Enterprise Architects
- Change Agents
- Strategic Planners
- Business Managers
- Anyone preparing for Business Architecture Certification

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Business Capabilities

- What is a Business Capability?
- BIZBOK view
- Capability Modeling
- Assuring unique non-redundant Capabilities
- The Burlton Capability Hexagon

Workshop: What are your Business Capabilities?

Business Process Architecture: Value Streams: and an End-to-End view

- Value Streams and Business Processes: BIZBOK view
- Stakeholder Journeys and Lifecycle
- The Skeleton Process Architecture
- Value Streams and Value Stream Stages
- Deriving a value-focussed Process Architecture
- Using Business/Industry Frameworks
- Examples of real company Architectures

Workshop: What are your Value Streams and End-to-End Processes?

Alignment to Decisions and Business Rules

- Policies, Decisions and Business Rules and their architectural alignment
- The Operational Decision Questions Hierarchy

Workshop: Articulating critical Decisions and Business Rules?

Business Performance Models

- Characteristics of Good Performance Indicators
- The new Balanced Scorecard
- Lagging and Leading Indicators
- Measurement Traceability to Strategic Objectives
- Measuring Operating Processes

Workshop: What is your Performance Scorecard?

Alignment of Business Architecture with IT Enablement

- Services, Microservices and APIs
- BPMS (process engines)
- BRMS (rules engines)
- Business Activity Monitoring and Analytics(measurement)
- ERP

Alignment with Human Competencies

- Competence
- Motivation, Behavior and Culture
- Structural and Cultural Maturity

Prioritization of Change: Heat Maps

- Evaluating Process, Information and Capability Value and Performance Gaps
- Heat Map Grids
- Pain - Gain Analysis for assessment of Capabilities, information and Processes
- The Burlton Capability Framework for Resource Change Planning
- Defining Change Priorities

Workshop: What are your Business Process and Capability Priorities?

Leveraging the Architecture into a Business Change Portfolio

- Using the Business Architecture Models in Business Change
- Cross Mapping Capabilities and Processes: Impact Analysis
- Defining the Portfolio of Process and Capability Changes
- Scoping a Change Project
- Building the Roadmap

Workshop: Which Processes and Capabilities are in scope for projects.

Sustaining the Architecture through Governance

- Governance Maturity Checklist
- Architecture Sustainment - CoE Support

Summary

- Lessons Learned

Digital Process Analysis and Design:

Optimising the Customer Experience through Digital Innovation

Roger Burlton

Overview

This course will address what degree of process work is required for today's organizations striving to establish digital business capabilities to optimize the end to end customer journey and leverage resources in the most effective manner. It will emphasize the customer aspects of the challenge given that customers are no longer recipients of what we do but are key actors with us in doing it. They are a part of newly conceived business processes in partnership with us. We have to design shared processes with them in mind. This course deals with the development of digitalized processes and services. It does not address digital strategies or digital architecture directly.

Learning Objectives

- Build a customer journey and find moments of truth
- Segment customer types and define personas
- Understand existing customer bottlenecks and constraints and opportunities to remove them
- Identify potentially useful digital technologies
- Design end to end value stream processes that start and end with the customer process
- Reconceptualise the customer interaction with our processes
- Recognize genuine design constraints from other outside stakeholders
- Deal with behavioral and cultural change
- Define the change program

Course Outline

The Digital Challenge

- Drivers and Trends of Digitalization
- Digital Strategy
- Digital vs Digitalization
- Some definitions and truths

Examples: Uber, AirBnB and other usual suspects

Process Methodology Response

- Traditional approaches
- Process Analysis and Design for the digital world
- The Concept Model as home base
- The Burlton Capability Hexagon

Case study Workshop: Developing your concept model

Understand: Stakeholders, Vision and Scope

- Value Chain and the scope of your included processes
- External Stakeholders classification
- Segmentation and Personalization
- The use of Personas
- Customer needs and value proposition
- Customer experience
- The North Star for your design

Example: Ordering of customized confectionery

Case study Workshop: Analyzing the Stakeholders

Case study Workshop: Defining the North Star

Analysis: Modelling and Analyzing the Process

- How much current analysis and modeling is needed
- Analysis and Modeling options
- Dealing with the data

Case study Workshop: Analysing the current capability

Customer Process Experience Baseline

- A typical Customer Experience pattern
- Finding Moments of Truth
- The Customer Journey map
- Attributes of a great customer experience

Case study Workshop: Developing the Customer Journey

Digital Inspirations

- Digital Solution Patterns and Benchmarks
- Omni-Channel characteristics
- Mobile characteristics
- RPA (Robotic Process Automation) characteristics
- AI and Cognitive characteristics
- Automating Decisions and Business Rules
- Additional Technology potential

Example: Mortgage Decisioning Redesign

Design the Process and Capabilities

- Small Change vs Substantive change
- Design principles

- Creative workshops to leverage the inspiration
- The new digital process
- Designing measurement and feedback
- Detailed mapping
- The required capabilities and resources

Example: Justice System peer to peer case resolution

Case study Workshop: Designing the digitalized process workflow

Case study Workshop: Validating with the process scenarios

Case study Workshop: Defining the digitalized process capabilities and resources

Culture and Behavioural Change

- Developing the competencies: the core skills needed
- Specifying the group behaviour as a set of requirements
- Overcoming internal stakeholder concerns
- Communication: what to say and when
- Sustaining the journey: measuring, monitoring and coaching

Example: Board of Directors Digitalization

Implementation Options

- Digital Base Capabilities
- The role of iPMS, Decision and Rules engines
- Standards and Protocols
- Technical Foundation

Presenter

Roger T Burlton is the co-founder of BPTrends Associates, founder of Process Renewal Group and the author of 'Business Process Management: Profiting from Process'. He is considered an industry leader in the introduction of innovative approaches for organizational change. To date, he has conducted over seven hundred seminars and has presented to over fifty thousand professionals. His seminars have been translated for diverse audiences around the globe.

Audience

- Process Analysts and Designers
- Business Analysts
- Business Leaders
- Agilists
- Business Architects
- Anyone else concerned with designing and sustaining an agile business

This class will be of benefit to professionals and managers of all types involved with designing and developing digitalized business processes.

Special Features

- Modernizes process analysis and design work to optimize digital processes
- Deals with customer-in-command processes and business solutions: Journeys and Experiences
- Minimizes Process Analysis for Digital Process to only enough of what you really need?
- Brings a wealth of opportunities for Process Innovation
- Features several examples of digitalized processes
- Involves a series of hands on progressive exercises in designing a digital process solution

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Presenter

Alec Sharp's expertise includes business analysis, data modelling, project recovery, facilitation, and, especially, business process change. In addition to his consulting practice, he conducts top-rated workshops and conference presentations on five continents a year. Alec is the author of "Workflow Modeling, second edition" which is widely used as a consulting guide and university text.

"Alec made the learning fun with a great blend of humour, involvement and time for reflection. The seminar was well structured and it flowed end to end. I had heard that Alec was a great presenter and I was not disappointed"

Malcolm Priestner, Senior Business Analyst, Met Office

"Excellent. Best seminar ever attended. Outstanding, engaging, knowledgeable, inspiring."

Stella Reynard, Business Analyst, Aveva

"Quite simply the best seminar I have been on. Used techniques I've never seen used before to engage the audience, keep us entertained, help us learn and understand and ... make us laugh. I was expecting great things and it delivered."

Susan Allan, Business Systems Manager, Wood Group PSN

Overview

Delegates to this course will first learn exactly what a "business process" is, and techniques to effectively convey the concept to others. The key factors to consider when working with processes and how to avoid the most common pitfalls are also introduced. On this foundation, the course then shows how to discover and scope a business process, clarify its context, assess it and establish improvement objectives, apply various approaches for modelling it to an appropriate level of detail, re-assess it in light of findings from modelling, and employ a structured approach to designing a new process. A modular, "feature-based" approach to process design is described that delivers significant change in agile timeframes, often in as little as a few days. Everything is backed up with real-world examples, repeatable guidelines, workshop exercises, and group discussions.

Learning Objectives

- Identify a "true" business process, and specify its boundaries and goals
- Describe the key factors that differentiate process and functional approaches
- Employ a variety of techniques to keep stakeholders involved, and promote "process orientation"
- Establish the scope, issues, and goals for a business process
- Model process workflow at progressive levels of detail using Swimlane Diagrams
- Stop process modeling at the appropriate point, and move on to other techniques or phases
- Conduct a structured assessment of a business process
- Transition to the design of a new process while avoiding common (and serious!) pitfalls

Course Outline

Business Processes – What They are and How to Discover Them

- Variations on what is meant by "process"
- Guidelines for well-formed processes and business processes
- Impacts of incorrectly identifying business processes
- Example – using this method in identifying "true" business processes
- Summary – six rules for business processes

Working with Business Processes – Frameworks, Difficulties and Methods

- Two perspectives: functional (skills and resources) and business process (results and value)
- Reconciling the two – philosophies and methods for helping functions and processes get along
- Impact of business processes for application and process architects
- Introduction to process modeling techniques – decomposition, flow, and other techniques
- Progressive detail – working through the scope, concept, and specification levels
- Understanding the six enablers of a business process – a critical framework
- Methodology overview – a three-phase approach to completing a process-oriented project

Discovering your Enterprise's Business Processes

- Depicting "process areas" with an "overall process map" or "process landscape"
- Using "off the shelf" frameworks
- Contrasting top-down and bottom-up methods for process discovery
- When to use one-on-one interviews, when to use group sessions
- Beginning your analysis by clarifying terminology – a structured approach
- Process patterns and inter-process relationships that will emerge

Case study: hands-on practice with process discovery, team work and group debrief

Framing the Process – Determining Scope, Issues, and Goals

- Separating the "what" from the "who and how"
- Defining "what" (the essence) and "who and how" (the current implementation)
- Case study – defining process scope
- Initial assessment of the "as-is" process and goal-setting for the "to-be" process
- Clarifying strategic direction – the process "differentiator"
- Issues and opportunities in applying the differentiator framework to a business process

Case study – process assessment, goals, and differentiator

Workflow Models – the Essentials

- The philosophy behind workflow models ("swimlane diagrams") – why we really do it
- The three most common errors in workflow modeling, and three keys to success
- Real examples of effective and ineffective process flow models
- Getting started – three questions to drive your initial swimlane diagram
- The three questions in practice – a real example
- Knowing when to stop – controlling the detail of your models
- Real example – what happens when detail gets out of control
- Three levels of workflow model ("handoff," "service," and "task") with examples and guidelines
- A warning sign that you've crossed the line and aren't modeling workflow anymore
- Making the transition to use cases, procedures, work instructions, and other job aids

Workflow Models – the Finer Points

- Guidelines for actors – who or what can or cannot be an actor on a swimlane diagram
- Special cases – depicting systems or machines, holding areas, and other processes as actors
- Guidelines for steps – naming, multi-actor, and sequential, parallel, and collaborative steps

- A translation guide – correcting unclear or misleading step names
- Guidelines for flow – what that arrow really means, common errors, parallel vs. exclusive flows
- Ensuring clarity with parallel vs. collaborative steps
- Additional symbols, keeping it simple, transition to BPMN

Techniques for Facilitating an As-Is workflow Modelling Session

- A reminder – why we really model the as-is process (to enable a holistic, fact-based assessment)
 - The basics – participants, resources, and tools
 - Facilitated session ground rules – specifics for "process" sessions
 - How to actually finish a flow diagram – one process, case, scenario, and path at a time
 - Recap – the three questions to drive your initial "handoff level" workflow model
- Case study – hands on practice with developing the initial workflow model
- Five more questions to validate and extend the initial model
- Case study – hands on practice with refining the initial workflow model

Transition to Process Design

- Three common redesign problems, three techniques to avoid them
 - (1) Enabler-based assessment of the as-is process – a proven framework and its role in redesign
 - A decision point – five options for going forward
 - (2) Challenging process assumptions – a practical technique for generating creative improvements
 - (3) Uncovering unanticipated consequences – an enabler-based assessment of characteristics
 - Finalising to-be process characteristics in a "process requirements document"
- Case study – assessing the as-is and characterizing the to-be process
- The to-be workflow – from characteristics to workflow model
 - A reminder – factors to make the new process sustainable

Audience

Business Analysts who are responsible for requirements specification or are involved in business process re-design or improvement.

Business and Process Architects responsible for establishing frameworks and direction for enterprise processes

Business Managers and Content Experts who will participate in process re-design or process-oriented application development efforts.

Prerequisites: There are no prerequisites in this course. However, Business Analysts who expect to do extensive process analysis will find that some understanding of information systems concepts may be helpful in establishing context.

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Advanced Business Process Techniques

Aligning Process Work with Strategic, Organisational and Cultural Factors

Alec Sharp

Overview

Many organisations radically improve their performance through business process change initiatives, while others fall short. It's easy to blame failure on technical factors, but they are almost never the primary cause. Experience shows three recurring themes in successful initiatives:

- True end-to-end processes were identified, and the right ones were selected for transformation;
- A holistic approach balanced technical factors with human, organisational, and cultural factors;
- That holistic understanding was reflected in an implementable and sustainable process design.

This intensive workshop provides proven, repeatable methods for successful business process change in Agile timeframes, well beyond what is covered in introductory courses. Throughout, the emphasis is on methods that support shared understanding and engagement, leading to buy-in and support for change. Specific techniques for discovering and assessing individual behavior and organisational culture are a centerpiece of this unique workshop. Participants will be well-prepared for the challenges of successful business process change. In fact, many organisations apply techniques learned in this workshop to all of their organisational change initiatives.

Topics will be covered with a discussion of the issue, a review of techniques, guidelines and examples, a brief workshop exercise, and a group solution and debriefing. The emphasis is on maximizing the delivery of content while keeping everyone engaged.

Real-life case studies are employed throughout – some participants say the examples of how the techniques are applied in practice is the best part of the workshop.

Learning Objectives

- Understand how to communicate business process concepts with executives, managers, and individual contributors in a way that stimulates interest and builds support for change.
- Learn objective criteria for an end-to-end process, and top-down and bottom-up methods for discovering business processes and rapidly developing a process architecture.
- Learn how to encourage support for business process change at every stage of an initiative, and the critical importance of a “what first, who and how next, only then why?” approach.
- Understand a practical and agile business process change methodology incorporating specific techniques for addressing human, organisational, and cultural factors.
- Be able to apply innovative techniques for rapidly building relevant, accessible process models, especially at the scope (context) and conceptual (understanding) levels.
- Become familiar with the techniques for designing a future-state process, and how they are applied in a proven, step-by-step method.

Course Outline

Communicating about “Business Process” with Executives, Managers, and Individual Contributors

- Why senior executives (and everyone else) often misunderstand “process”
- Five key points to cover in an executive briefing
- Winning over the masses - why people fear “process,” how to get them on board
- Business Process within a framework for Business Analysis

Discovering Processes and Developing a Process Architecture

- “Process” fundamentals, components, conventions, and a process architecture taxonomy
- A bottom-up approach to process discovery
- Using standard frameworks and generic models in top-down approaches
- Exercising caution when using “off-the-shelf” process reference frameworks
- Case study – a multi-pronged approach to building a process architecture within tight budget and time constraints
- Methods for assessing, prioritizing, and selecting processes for transformation
- Case Study – Using the Process Architecture to assess and support a new initiative

Building Support for Change into Your Business Process Methodology

- Five techniques to avoid
- Seven specific techniques to build support for process change
 - The power of “venting”
 - What first, who and how later – abstraction to the essence
 - How to build a compelling and blame-free Case for Change that answers why?
 - Clarify what you need to be great at – the process’ strategic differentiator
 - Understand enablers – the levers of change, and the ones that matter most
 - Frameworks for assessing culture and beliefs, and their

Audience

Anyone involved in Business Process Change and Business Process Management (BPM), especially:

- Business Process Analysts and Designers
- Business Analysts
- BPM professionals
- Business Architects
- Process Architects
- Information Systems Architects
- Organisational Change professionals
- Project / Programme Managers
- Business Managers and other professionals responsible for effecting process change, and needing to learn more about business processes

Presenter

Alec Sharp, a senior consultant with Clariteq Systems Consulting, has deep expertise in a rare combination of fields – business process analysis and redesign,

strategy development, application requirements specification, and data modelling. His 35 years of hands-on consulting experience, practical approaches, and global reputation in model-driven methods have made him a sought-after resource in locations as diverse as Ireland, Illinois, and India. He is also a popular conference speaker, mixing content and insight with irreverence and humor. Among his many top-rated presentations are “The Lost Art of Conceptual Modeling,” “Modelling Failure,” “Getting Traction for ‘Process’ – What the Experts Forget,” and “Mind the Gap! – Integrating Process, Data, and Requirements Modeling.” Alec literally wrote the book on business process modeling – he is the author of “Workflow Modeling: Tools for Process Improvement and Application Development – second edition.” Popular with process improvement professionals, business analysts, and consultants, it is consistently a top-selling title on business process modeling, and is widely used as an MBA textbook. The completely rewritten second edition was published in 2009, and has a “5 star” Amazon.com rating. Alec was also the sole recipient of DAMA’s 2010 Professional Achievement Award, a global award for contributions to the Data Management field. Alec’s popular workshops on Working With Business Processes, Data Modeling (introductory and advanced), Requirements Modeling (with Use Cases and Business Services), and Essentials of Facilitation and are conducted at many of the world’s best-known organizations. His classes are practical, energetic, and fun, with a most common participant comment being “best course I’ve ever taken.”

Presenter

James Archer is a business analyst, consultant, teacher, writer and innovator. He is co-editor and contributing author of Business Analysis and Leadership. He identifies the key to great business analysis as an inclusive leadership style, thinking innovatively, working collaboratively, acting strategically and helping people discover their real requirements. James is one of the founders and organisers of the Business Analysis European Conference. He is also an associate of the Atlantic Systems Guild and has contributed to the development of and taught the Volere approach to requirements and business analysis for the last 8 years.

"Inspirational. Able to provide lots of examples to demonstrate theories and practices."

Zoey Moore, Business Project Manager, Aegon UK Services

"James Archer was excellent, knowledgeable and approachable. One hundred per cent of the content was relevant. The seminar exceeded my expectations."

Kieran Neeson, Business Analyst, Waters

"Lively, knowledgeable, articulate - absolutely excellent."

Steve Coe, Requirements & Testing Manager, Department for Work and Pensions

Overview

Requirements is the most crucial part of development. Requirements today is about uncovering the real needs of the problem space, understanding the needs of the people who use your solution, recognising the environment for the solution, then, in a timely manner, delivering requirements that are concise, clear and testable. This workshop, presented by a real business analyst, gives you a thorough and well-established process for uncovering the real requirements, testing them for correctness, and ensuring that all the requirements have been discovered. The process is used with variations by both agile and traditional projects. It starts with the business, for it is only within the business that you discover the real needs. When you know the real needs, it becomes possible to determine what will best serve those needs, and to write the requirements or stories to build the right solution.

Learning Objectives

- Determine the real needs of your stakeholders
- Understand the role of the business analyst in agile projects
- Write agile stories that are more effective and accurate
- Write requirements that are complete, traceable, and testable
- Learn diverse elicitation techniques to uncover the real requirements
- Use the Volere Knowledge Model to ensure you have all the needed information, and nothing that is not needed
- Understand the need for, and how to write, functional and non-functional requirements.
- Precisely define the scope of the problem
- Discover all the stakeholders and keep them involved
- Uncover the essence of the business
- Use prototypes, sketches and storyboards to discover hidden needs
- Use state of the art requirements techniques
- Get the requirements quickly, and incrementally
- Write the right requirements and stories

Course Outline

The Requirements Process

- An overview of the process for gathering and verifying requirements
- A discussion on how this process can fit into your organization
- A demonstration of how requirements fit into agile processes

Project Blast-Off

- Scope, Stakeholder, and Goals; the holy trinity of requirements gathering
- How to define a precise scope for the business area to be studied
- How to "Step Back" for a better look at the business
- How to use stakeholder maps to find all the stakeholders
- How to ensure the project's goal is measurable and testable

Trawling for Requirements

- How to use business events and business use cases to find the right business
- How to use apprenticeship, workshops and other elicitation techniques
- Using the Brown Cow model to see the work more clearly
- How to be more innovative with requirements

Functional Requirements

- Use case scenarios, and how they are used to find the right product to build
- Determining the system boundary
- How to find the requirements, and write them clearly
- How to write requirements, not solutions
- How to handle requirements for agile projects

Non-functional Requirements

- The importance of non-functional requirements
- Usability, look and feel, performance, security and other non-functional requirements.
- How to find the non-functional qualities the product must have

Requirements for Agile Projects

- How requirements work with agile techniques
- Role of the business analyst in agile
- Writing better user stories

Prototypes and Deviations

- Using sketches and prototypes to drive out requirements
- Low and high-fidelity prototypes
- Exceptions, alternatives and misuses

Writing Requirements

- Communicating requirements
- Correct formulation of requirements
- How to write fit criteria to make your requirements precise and accurate

The Quality Gateway

- How to test requirements and ensure that they are fit for purpose
- How to prevent scope creep
- How to avoid gold-plated requirements that add little value to the system
- How to ensure the requirement is a complete statement of need

Managing Your Requirements

- Strategies for requirements projects
- Using the Requirements Knowledge Model to manage your requirements

Prioritising requirements

- Dealing with conflicting requirements
- Automated requirements tools

Your Requirements Process

- Making your own process more effective
- Incorporating your organisation's requirements practices into what you have learned

Audience

If you want to be involved in delivering the right systems—the ones that get used, then this course is for you. Typical delegates include:

- Business Analyst
- Agile Team Members
- Systems Analyst
- Requirements Manager
- Requirements Engineer
- Project Leader / Manager
- Product or Program manager
- Product Owner
- Consultant

Special Features

- Your instructor is not an "announcer". He or she is a practicing business analyst who also happens to be an excellent instructor.
- The course is written to show real-world situations and provide real-world solutions. You will be able to relate your own work situation to the course.
- You can discuss your own requirements issues with your instructor.
- You learn that requirements come from understanding the business and its internal processes, and how the business interacts with its external customers.
- The course provides a realistic framework for requirements discovery, not a strict methodology. The framework provides the freedom and encouragement to adapt to your own organizational needs.
- The techniques are applicable regardless of your development method - agile, traditional or anything else.
- The Brown Cow model to give you different and beneficial ways to look at the problem.
- The Volere requirements knowledge model which ensures you collect the right information, and the right amount of it.
- You receive the Volere Requirements Specification Template (downloaded over 20,000 times) with advice on how to make this your own template.
- A free copy of Suzanne and James Robertson's best-selling book, Mastering the Requirements Process - 3rd Edition, Getting Requirements Right.

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Business Analysis Agility

Adrian Reed

Overview

Business analysis is changing – for the better. Whether you work in a traditional environment, or as part of an agile team, your business analysis approach today can be more flexible, more nimble, more effective, more focused on solving the right problem and delivering real value. Despite all our technological advances, our biggest problem is still the human one: How to ensure you know your customer's real problem, and how to ensure that your solution is correctly solving that problem. Business analysis agility means using an adaptable approach to challenge assumptions, to make better use of feedback, to iterate, to use more flexible tools, and to understand the customers' value when discovering their real, underlying needs. For it is only by addressing the right needs and solving the right problem can you deliver real value to your customer and your sponsor. This course gives you a different approach to business analysis. This one provides a business analysis framework that works regardless of whether you are part of an agile environment and need to provide stories for iterative development, or whether you are in a traditional environment and need to produce a requirements specification suitable for more formalized environments and outsourcing. This course gives you a vision of the modern business analyst, one who understands the role is much more than writing requirements.

Learning Objectives

- How to discover your customer's needs and values
- How to ensure your solution solves the right problem
- How safe-to-fail probes can establish that your solution delivers value
- How to see the bigger picture of business processes and business needs
- How to be a better business analyst

Course Outline

Agile Business Analysis

- An agile framework for business analysis
- Continuous nature of discovery and delivery
- Agile or traditional requirements

Do You Know What Your Customers Value?

- Identify and prioritise the customer segments
- Value propositions
- Value to the customers, value to your organisation

Are You Solving the Right Problem?

- Essence of the customer's problem
- Generating multiple candidate solutions
- Safe to fail probes to prove a candidate solves the right problem
- Finding the best candidate solution

Investigate the Solution Space

- Scoping the solution space – the extent of the solution
- Business processes within the solution

Audience

Business analysis is a universal task, but it normally falls to skilled people with a job title such as:

- Business Analysts working with agile teams
- Business Analysts working with traditional teams
- Product Owner
- Agile team member
- Business stakeholders
- Project Leader
- Requirements Engineer
- Product or Program Manager

.. or similar titles.

We also find Business Stakeholders, Users and Software Customers benefit from learning advanced business analysis techniques, and how they can contribute to the organisation's wellbeing.

Special Features

- Teaching chapters are reinforced with hands-on workshops
- The course is run interactively with lots of opportunity to discuss issues with the instructor, and with other participants
- You are shown how the course applies to your own work situation
- Participants receive a copy of Business Analysis and Leadership, edited by Penny Pullan and James Archer
- Your instructor has real world experience, and is willing to discuss how you can be most effective doing business analysis in your organisation

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

This course, Pre-Project Problem Analysis: Practical Techniques for Early Business Analysis Engagement, is a course endorsed by the IIBA. The course is aligned with the BABOK v3. By attending this course you will earn 14 PDs (Professional Development hours) or 14 CDUs (Continuing Development Units).

Overview

Increasingly, organisations are operating in fast-moving and often volatile business environments. Project teams need to respond quickly to tricky and often ill-defined problem situations, enabling the organisation to adapt and meet the ongoing demands of its customers and environment. In these contexts the pre-project stage is crucial: For our change initiatives to be successful, we need to truly understand the problem we are trying to solve. By understanding the problem we can ensure that any future project activity is built upon a firm foundation, and is heading towards a set of goals that are concise, precise and have been agreed upon.

This practical, hands-on workshop, focusses on the problem-solving skills that practitioners need in order to collaboratively explore and describe problems, and to co-create potential options for improvement. These skills are extremely valuable pre-project and early in the project lifecycle, and this course will be of interest to business analysts and other practitioners who help analyse, assess and solve tricky organisational problems.

Learning Objectives

- Understand what pre-project problem analysis is, and its significance in the analysis and project lifecycle
- Understand the importance of stakeholder identification, categorisation and management
- Be able to use a range of problem analysis techniques to understand problem situations
- Be able to define a problem using a 'problem statement' and understand how successful outcomes can be articulated with Critical Success Factors and Key Performance Indicators
- Understand what a Business Use Case diagram is and understand its value in articulating scope during pre-project problem analysis
- Use a 1 page 'Project Concept Summary' template to bring together a potential project idea onto a page

Course Outline

Introduction

- What is 'Problem Analysis?': A brief introduction to the course, and a discussion of why it is important that we analyse the problem before assuming or implementing a solution

Stakeholders in Problem Analysis

- Identifying Stakeholders: Tips for identifying likely stakeholders, along with suggestions of potential 'generic' stakeholder types that regularly warrant consideration
- Stakeholder Analysis: Categorisation of stakeholders
- Communication/Engagement Planning: Planning how to liaise with stakeholders in the early stages of problem investigation
- Power & Politics: Discussion of how power & politics can affect problem solving, and how it affects us as practitioners

Understanding the Problem Situation

- Elicitation Techniques: Overview of a range of techniques for eliciting information about a problem situation (Interviews, Workshops, Observation, Document Analysis)
- Categorising Problematic Situations: The difference between a 'difficulty' and a 'mess'
- Problem Analysis Techniques: Practical overview of:
 - 5 Whys
 - Fishbone Diagram
 - Multiple Cause Diagram
 - Causal Loops
- External Environment Analysis: Practical overview of STEEPLE technique for analysing the broader business or organisational context
- Perspectives: The importance of understanding that different stakeholders may perceive the problem situation differently
- Defining the Problem: Overview of a typical 'Problem Statement', along with a discussion of pros/cons and when it is most useful
- Defining Success: Critical Success Factors (CSFs), Key

Performance Indicators (KPIs), Balanced Business Scorecard

Defining Business Requirement Scope

- Roles & Goals: Defining the 'roles' that are involved in the problem space and their (business) goals
- Business Use Case Diagram: Introduction to Business Use Case diagrams as a way of scoping out the high level business requirements on a problem situation/potential project concept
- Requirement Types: Brief discussion of other requirement types that may emerge early in the project lifecycle

Identifying Areas for Change

- Gap Analysis: Comparing the output from the techniques in previous sections to identify areas where change is desirable
- Existing Solution Evaluation: Discussion on approaches for benchmarking/measuring existing solutions to determine where improvement may be needed

Generating Improvement Ideas

- Creative Thinking Techniques: Techniques for generating a range of potential ideas for improvement:
 - Brainstorming
 - Brainstorming Enhancers
- Types of Improvement Approach: Discussion of the breadth of improvement approaches that are generally available, which is often wider than initially anticipated. Discussion on feasibility: What might stop or inhibit an approach being acceptable

Bringing It All Together

- Project Concept Summary: Overview of a one page 'project concept summary' outlining the problem, likely requirement scope, and potential solutions
- Validation: How to ensure the 'project concept summary' is validated by key stakeholders
- Next steps: What next after the 'project concept summary'

Audience

This course is well suited for anyone needing to understand how to undertake problem analysis early in the project lifecycle. It will be of particular interest to BA teams that are looking to 'left shift' and seek early engagement. Typical delegates include:

- Business Analysts
- Business Systems Analyst
- Consultants
- Requirements Manager
- Requirements Engineers
- Product Owner

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Data Governance: A Practical Guide

Nigel Turner

Overview

Data Governance is rapidly becoming a 'must have' for any organisation wanting to manage its data, improve its quality, and control its security, access and uses. An average organisation's data is doubling every 15 months. Propelled by Big Data, Cloud Computing and other innovations, this rapid increase in volumes is compounded by the increasing speed and complexity with which data is created and stored. Organisations are also under increasing customer, regulatory and legal pressures to get data right. Data Governance is seen as a keystone in any solution to address these challenges. Many organisations have already recognised the potential value of Data Governance and have started governance initiatives. Though some have succeeded, many are faltering or have failed. Attending this 2-day seminar & workshop will ensure that you set off on the right path to successful and sustainable Data Governance. Key Topics include:

- What is Data Governance?
- Why is it increasingly a 'must have' for organisations
- Building the internal case for Data Governance
- How and where do you start to introduce Data Governance
- What are the main components of a successful Data Governance initiative
- How can you revitalise or recover a faltering Data Governance programme
- Creating the Data Governance roadmap
- What benefits can you expect and how you measure them
- Real life Data Governance success stories
- Your role in Data Governance – how to prepare yourself to win

Note that course will help you whether you are new to Data Governance or already working as part of an existing Data Governance team or programme.

Learning Objectives

- Understand what Data Governance is, and what it isn't
- Assess the readiness of your organisation for Data Governance
- Be able to align a Data Governance proposal and initiative with your key organisational & departmental drivers
- Make the internal business case for investment in Data Governance
- Be able to identify and apply the six necessary components of a Data Governance framework
- Create a realistic plan of action for Data Governance
- Apply these practices to a fictional, but highly realistic organisation via a hands on case study
- Learn from best practices in other organisations who are already implementing Data Governance

Course Outline

Scene Setting & Introductions

- Scope & objectives of the seminar
- Seminar agenda & attendee expectations
- Introduction to the case study

Data Governance Context & Drivers

- The overall data landscape
- Some recent data disasters & horrors
- Current & future data challenges
- The overall industry impact of poor data
- A call for action

Data Governance – An Industry Assessment

- Data Governance – definitions and focus
- How successful has Data Governance been?
- Why Data Governance can fail
- Key components of success – breaking down the barriers

The Components of Successful Data Governance

- The DAMA DMBOK wheel – the centrality of Data Governance
- The Data Governance Framework explained:
- Vision & Strategy
- Organisation & People
- Processes & Workflows
- Data Management & Measures
- Culture & Communications
- Tools & Technology
- Applying the Data Governance Framework

Establishing a Starting Point – Data Governance Readiness

- Plotting the journey – Data Governance maturity
- Implications of the maturity assessment
- Case study exercise 1 – context and maturity assessment

Building the Data Governance Strategy

- Vision & Strategy
 - Creating a clear Data Governance vision
 - Understanding business drivers
 - Identifying key data challenges
 - Producing a Motivation Model
 - Building a business case for Data Governance
 - Case study exercise 2 – Creating a Motivation Model
- Organisation & People
 - Organising for Data Governance – industry model structures
 - The pros & cons of each model
 - Required teams, roles & skills
 - Deciding on the right model for any specific organisation
 - Case study exercise 3 – Designing a Data Governance organisation
- Processes & Workflows
 - Data Governance & business process design & operation
 - Analysing business processes – Lean approaches
 - Designing Data Governance processes & workflows
 - Data Governance processes explained
 - Case study exercise 4 – Business process analysis & Data Governance processes and workflows
- Data Management & Measures
 - The importance of measurement in Data Governance
 - What to measure & how to measure it – the importance of data definition
 - Establishing baselines and improvement targets
 - Data Improvement Projects

- Tracking and sustaining the benefits
- Case study exercise 5 – Data definitions and Data Improvement Projects
- Culture & Communications
 - The importance of selling Data Governance
 - Cultural change & Data Governance
 - Key skills & competencies required
 - Communications strategies and plans
 - Case study exercise 6 – Creating a Communications Plan
- Tools & Technology
 - The role of IT in Data Governance
 - Potentially useful tools in Data Governance
 - Making the case for new tools & technologies
 - Case study exercise 7 – Tool selection & procurement business case

Creating the Data Governance Roadmap

- Bringing it all together – the Data Governance Roadmap
- Hints & tips for developing Roadmaps
- Implementing the Roadmap: a three phase approach
- Case study exercise 7 – Creating a Data Governance roadmap & selling it

Data Governance in Reality

- A summary of real life Data Governance success stories
- Telecommunications
- Utilities
- Banking & Finance
- Retail
- Professional Certification Organisation
- Lessons learned from these case studies

Summary & Conclusions

Audience

Individuals and teams who are playing, or would like to play, an active role in the implementation of a Data Governance initiative. It will also be of interest to anyone working in a relevant business or IT role who wants to know more about Data Governance concepts and practices. Typical roles who will benefit from this tutorial / workshop include:

- Heads of Data Governance & their teams
- Chief Data Officers & their teams
- Data Stewards
- Data Owners
- Information Strategists & Architects
- Business Analysts
- Data Quality Specialists
- Master Data Management Practitioners

Presenter

An analyst and consultant, Mike Ferguson specialises in business intelligence/ analytics, data management, big data and enterprise architecture.

With over 35 years of IT experience, Mike has consulted for dozens of companies on business intelligence strategy, technology selection, enterprise architecture, and data management. He has spoken at events all over the world and written numerous articles.

Audience

- Chief Data Officers
- Data Architects
- Master Data Management Professionals
- Big Data Professionals
- Data Integration Developers
- Business Data Analysts doing self-service data integration
- Content Management Professionals
- Database Administrators

Overview

This 2-day course looks at the challenges faced by companies trying to deal with an exploding number of data sources, collecting data in multiple data stores (cloud and on-premises), multiple analytical systems and at the requirements to be able to define, govern, manage and share trusted high quality information in a distributed and hybrid computing environment. It also explores a new approach of how IT data architects, business users and IT developers can collaborate together in building and managing an enterprise data lake to get control of your data. This includes data ingestion, data discovery, data profiling and tagging and publishing data in an information catalog. It also involves refining raw data to produce enterprise data services that can be published in a catalog available for consumption across your company. We also introduce multiple data lake configurations including a centralised data lake and a 'logical' distributed data lake as well as execution and governance across multiple data stores. It emphasises the need for a common collaborative process and common approach to governing and managing data of all types.

Learning Objectives

- How to define a strategy for producing trusted data as-a-service in a distributed environment of multiple data stores and data sources
- How to organise data in a centralised or distributed data environment to overcome complexity and chaos
- How to design, build, manage and operate a distributed or centralised data lake within their organisation
- The critical importance of an information catalog for delivering data-as-a-service
- How data standardisation and business glossaries can help define the data to make sure it is understood
- An operating model for effective distributed information governance
- What technologies they need and implementation methodologies to get their data under control.
- How to apply methodologies to get master and reference data, big data, data warehouse data and unstructured data under control irrespective of whether it be on-premises or in the cloud.

Course Outline

Strategy & Planning

- The ever increasing distributed data landscape
- The siloed approach to managing and governing data
- IT data integration, self-service data wrangling or both? - data governance or data chaos?
- Key requirements for data management
- Dealing with new data sources - cloud data, sensor data, social media data, smart products (the internet of things)
- Understanding scope of your data lake
- Building a business case for data management
- Defining an enterprise data strategy
- A new inclusive approach to governing & managing data
- Introducing the data reservoir and data refinery
- Data lake configurations - what are the options
- Information Supply Chain use cases - establishing a multi-purpose data lake
- The rising importance of an Information catalog
- Key technology components in a data lake
- Hadoop as a data staging area and why it is not enough
- Implementation run-time options - the need to execute in multiple environments
- Integrating a data lake into your enterprise analytical architecture

Information Production Methodologies

- Information production and information consumption
- A best practice step-by-step methodology structured data governance
- Why the methodology has to change for semi-structured and unstructured data
- Methodologies for structured vs multi-structured data

Data Standardisation, The Business Glossary and The Information Catalog

- Semantic data standardisation using a shared business vocabulary within an information catalog
- The role of a common vocabulary in MDM, RDM, SOA, DW and data virtualisation
- Why is a common vocabulary relevant in a data lake and a Logical Data Warehouse?
- Approaches to creating a common vocabulary
- Planning for a business glossary
- Organising data definitions in a business glossary
- Key roles and responsibilities - getting the operating model right to create and manage an SBV
- Formalising governance of business data names, e.g. the dispute resolution process
- Business involvement in SBV creation
- Beyond structured data - from business glossary to information catalog
- What is an Information Catalog?
- Why are information catalogs becoming

critical to data management?

- Information catalog technologies, e.g. Alation, Alteryx Connect, Amazon Glue, Apache Atlas, Collibra Catalog, IBM Information Governance Catalog & Watson Knowledge Catalog, Informatica EIC & Live Data Map, Microsoft Azure Data Catalog, Podium Data, Waterline Data, Zaloni Mica
- Information catalog capabilities

Organising & Operating The Data Lake

- Organising data in a centralised or distributed data lake
- Creating zonesto manage data
- New requirements for managing data in centralised and distributed data lakes
- Creating collaborative data lake projects
- Hadoop as a staging area for enterprise data cleansing and integration
- Core processes in data lake operations
- The data ingestion process
- Tools and techniques for data ingestion
- Implementing systematic disparate data and data relationship discovery using Information catalog software
- Using domains and machine learning to automate and speed up data discovery and tagging
- Alation, IBM Watson Knowledge Catalog, Informatica CLAIRE, Silwood, Waterline Data Smart Data Catalog
- Automated profiling and tagging and cataloguing of data
- Automated data mapping
- The data classification and policy definition processes
- Manual and automated data classification to enable governance
- Using tag based policies to govern data

The Data Refinery Process

- What is a data refinery?
- Key requirements for refining data
- The need for multiple execution engines to run in multiple environments
- Options for refining data - ETL versus self-service data preparation
- Key approaches to scalable ETL data integration using Apache Spark
- Self-service data preparation tools for Spark and Hadoop, e.g. Alteryx Designer, Informatica Intelligent Data Lake, IBM Data Refinery, Paxata, Tableau (Project Maestro), Tamm, Talend, Trifacta
- Automated data profiling using analytics in data preparation tools
- Executing data refinery jobs in a distributed data lake using Apache Beam to run anywhere
- Approaches to integrating IT ETL and self-service data preparation
- Apache Atlas Open Metadata & Governance
- Joined up analytical processing from ETL to analytical workflows
- Publishing data and data integration jobs to the information catalog
- Mapping produced data of value into your

DW and business vocabulary

- Data provisioning - provisioning consistent information into data warehouses, MDM systems, NoSQL DBMSs and transaction systems
- Provisioning consistent refined data using data virtualisation, a logical data warehouse and on-demand information services
- Governing the provisioning process using rules-based metadata
- Consistent data management across cloud and on-premise systems

Refining Big Data & Data for Data Warehouses

- A walk through of end-to-end data lake operation to create a Single Customer View
- Types of big data & small data needed for single customer view and the challenge of bringing it together
- Connecting to Big Data sources, e.g. web logs, clickstream, sensor data, unstructured and semi-structured content
- Ingesting and analysing clickstream data
- The challenge of capturing external customer data from social networks
- Dealing with unstructured data quality in a Big Data environment
- Using graph analysis to identify new relationships
- The need to combine big data, master data and data in your data warehouse
- Matching big data with customer master data at scale
- Governing data in a Data Science environment

Information Audit & Protection - The Forgotten Side of Data Governance

- What is Data Audit and Security and what is involved in managing it?
- Status check - Where are we in data audit, access security and protection today?
- What are the requirements for enterprise data audit, access security and protection?
- What needs to be considered when dealing with the data audit and security challenge?
- Automatic data discovery and the information catalog - a huge help in identifying sensitive data
- What about privileged users?
- Using a data management platform and information catalog to govern data across multiple data stores
- Securing and protecting data using tag based policies in an information catalog
- What technologies are available to protect data and govern it? - Apache Knox, Cloudera Sentry, Dataguide, Hortonworks Ranger, IBM (Watson Data Platform, Knowledge Catalog, Optim & Guardium), Imperva, Informatica Secure@Source, Micro Focus, Privitar
- Can these technologies help in GDPR?
- How do they integrate with Data Governance programs?
- How to get started in securing, auditing and protecting your data

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Information Management Fundamentals

Chris Bradley

Overview

This course address all the Information Management disciplines as defined in the DAMA body of knowledge (DMBoK). Taught by an industry recognized DAMA DMBoK(2.0) author and CDMP(Master) this course provides a solid foundation across all of the disciplines across the complete Information Management spectrum. By attending the course, delegates will get a firm grounding in all of the core Information Management concepts and illustrate their practical application throughout with real examples of how Information Architecture is applied. Additionally this course provides a solid foundation for students wishing to consider proceeding to take the Industry professional DAMA CDMP certification.

Learning Objectives

This course is intended to provide delegates with the knowledge, methods and techniques required to analyse, mature and implement information management solutions within your organisation. At the end of the course, delegates would have gained the following:

Level set understanding & terminology:

- Learn about the need for and application of Information Management disciplines for different categories of challenges
- Explore an Information Management framework and understand how it aligns with other architecture frameworks
- Explore concepts such as lifecycle

management, normalisation, dimensional modelling and data virtualisation and why they are important

- Understand the critical roles of Master Data Management and Data Governance and how to effectively apply them

Pragmatic Learning

- Learn the different MDM architectures, their suitability for

different needs and how best to implement Master Data Management approaches

- Develop a set of usable techniques that can be applied to a range of information management challenges
- Learn the best practices for managing Enterprise Information needs
- Through practical examples, learn how to apply techniques in information architecture planning

Course Outline

Introduction to the DMBoK

- What is the DMBoK, its intended purpose and audience.
- Changes due in DMBoK 2.0, and the relationship of the DMBoK with other frameworks (TOGAF / COBIT etc.).
- DAMA CDMP professional certification overview & CDMP exam coverage by DMBoK section.

Data Governance

- Why Data Governance is at the heart of successful Information Management.
- A typical DG reference model
- DG roles & responsibilities, the role of the Data Governance Office (DGO) & its relationship with the PMO.
- How to get started with Data Governance.

Data Quality Management

- The Dimensions of Data Quality, policies, procedures, metrics, technology and resources for ensuring Data Quality is measured and ultimately continually improved.
- A DQ reference model & how to apply it.
- Capabilities & functionality of tools to support Data Quality management.

Master & Reference Data Management

- The differences between Reference & Master Data.
- Identification and management of Master Data across the enterprise.
- 4 generic MDM architectures & their suitability in different cases.
- MDM maturity assessment to consider business procedures for MDM and the provision and appropriateness of MDM solutions per major data subject area.

- How to incrementally implement MDM to align with business priorities.

Data Warehousing & BI Management

- Provision of Business Intelligence (BI) to the enterprise and the manner in which data consumed by BI solutions and the resulting reports are managed. Particularly important if the data is replicated into a Data Warehouse.
- Types of BI, DW and Analytics.

Data Modelling & Metadata Management

- Provision of metadata repositories and the means of providing business user access and glossaries from these.
- The development, use and exploitation of data models, ranging from Enterprise, through Conceptual to Logical, Physical and Dimensional.
- Maturity assessment to consider the way in which models are utilized in the enterprise and their integration in the Software Development Life Cycle (SDLC).

Data Integration & Architecture Management

- What are the business (and technology) issues that Data Integration is seeking to address, the different styles of Data Integration, their applicability and implications.
- The approaches, plans, considerations and guidelines for provision of Data Integration and access.
- Consideration of P2P, ETL, CDC, Hub & Spoke, Service-orientated Architecture (SOA), Data Virtualization and assessment of their suitability for the particular use cases.

Data Lifecycle Management

- Proactive planning for the management of Data across its entire lifecycle from inception through, acquisition, provisioning, exploitation eventually to destruction. This IM discipline and its maturity assessment determine how well this is planned for and accomplished.

Data Risk Management, Security & Privacy

- Identification of threats and the adoption of defences to prevent unauthorized access, use or loss of data and particularly abuse of personal data.
- Exploration of threat categories, defence mechanisms & approaches, and implications of security & privacy breaches.
- Identification of risks (not just security) to data and its use, together with risk mitigation, controls and reporting.

Regulatory Compliance

- The policies and assurance processes that the enterprise is required to meet.
- Adapting to the changing legal and regulatory requirements related to information and data.
- Assessing the approach to regulatory compliance & understanding the sanctions of non-compliance.

Data Management Tools & Repository

- Examination of the categories of tools supporting the IM disciplines.
- How to select the appropriate toolset.
- Discussion of an example policy for use of specific technology to ensure consistency and interoperability across the enterprise.

Chris is an acknowledged thought leader in Data Modelling and Data Governance, author of several papers and books including "Data Modelling for the Business".

Overview

This 2-day course addresses the core data management topic of data modelling. Often misunderstood and relegated to just the technical aspect of "database design", data modelling is one of the most important disciplines of data management. The course introduces delegates to data modelling, its purpose, the different types of models, how to construct and read a data model, and the wider use of data models beyond the traditional area of database design. It contains a wide-ranging clarification of data modelling concepts and terminology, together with techniques for producing usable data models.

Learning Objectives

This course explains the essential data modelling building blocks. It will help students to understand the differences between relational and dimensional models, and between the different levels of Conceptual, Logical and Physical models. On completion they will be able to:

- Describe the purpose of, Conceptual, Logical, and Physical data models
- Create a Conceptual and a Logical Data model
- Read and interpret a data model
- Understand different approaches for fact finding and how to apply normalisation techniques
- Understand how to validate a data model.
- See the areas where Data modelling adds value to Data Management activities
- Understand the critical role of Data models in Master Data Management and Data Governance.

Pragmatic Learning:

- Understand the difference between, Conceptual, Logical, Physical and Dimensional Data models
- Learn the best practices for developing Data models that can be read by humans
- Through practical examples, learn how to apply techniques in Data modelling

At the end of the course, delegates would have gained the following:

Level Set Understanding & Terminology:

- Learn about the need for and application of Data Models

Course Outline

Data Modelling Basics

- What is Data Modelling and why does it matter
- What is the relationship between a data model and other types of models in the Enterprise Architecture
- What is a Conceptual Data model, why it's important and the pivotal role it plays in all architecture disciplines
- The major differences between Enterprise, Conceptual, Logical, Physical and Dimensional data models
- Data vs MetaData; what's the difference and why does it matter

Data Model Components

- Data Modelling Basics; Entities, Attributes, Relationships
- How to identify Entities and Subtypes
- What are the differences between exclusive and non-exclusive subtypes?
- How do different data modelling notations represent subtypes?
- Basic standards that you can use right away
- Relationships: Cardinality & Optionality, Identifying, Non-identifying, recursive, and many-to-many
- How does cardinality and referential integrity lead to better data quality?
- Rules for handling Super types, subtypes, many to many and recursive relationships
- Keys: Primary, Natural, Surrogate, Alternate, Inverted, Foreign
- What are the alleged and actual benefits of surrogate keys?
- Attribute properties & attribute domains

Creating Data Models

- How to get started with data models
- What core information is needed to create a data model, how this can be easily communicated to business people, and what visual constructs to use to get their attention
- Templates and guidelines for a step-by-step approach to implementing a high-level data model in your organization
- How to capture requirements for data models

Audience

Practitioners who will need to read, consume or create data models to gain a better understanding of data during Information Management initiatives including:

- Business Intelligence & Data Warehouse Developers & Architects
- Data Modellers
- Data Architects
- Data Analysts
- Enterprise Architects
- Solution Architects
- Application Architects
- Information Architects
- Business Analysts
- Developers
- Database Administrators
- Project / Programme Managers
- IT Consultants
- Data Governance Managers
- Data Quality Managers
- Information Quality Practitioners

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Mastering Data Modelling Techniques

Chris Bradley

Overview

This course explores the more advanced techniques for Data Modelling. In addition, techniques will be taught on how (and when) to create Data Models for non-relational solutions including Big Data together and the uses for data models beyond Relational DBMS development.

Learning Objectives

Practical Application:

- Build conceptual and logical data models, and know about compromises for physical design
- How to discover requirements for robust data models
- Understand where abstraction is valuable (and where it is risky)
- Where industry data models can provide a kick start
- How (and where) to apply standard solutions to well-known data modelling business scenarios.

Level Set Understanding & Terminology:

- Learn about the need for and application of Data Models in Big Data and NoSQL environments
- See the areas where Data modelling adds value to Data Management activities beyond Relational Database design
- Understand the critical role of Data models in other Data Management disciplines particularly Master Data Management and Data Governance

Pragmatic Learning

- Learn the best practices for developing Data models for Big Data and NoSQL environment
- Understand how to create data models that can be easily read by humans
- Recognise the difference between Enterprise, Conceptual, Logical, Physical and Dimensional Data models
- Through practical examples, learn how to apply different Data modelling techniques

Course Outline

Data Modelling Recap

- Data modelling basics
- major constructs
- identifying entities
- Data model types, and the linkage between them

Levels of Models

- Enterprise, Conceptual, Logical & Physical
- What is the purpose of each, do we need all of these in a Big Data world
- Where does Dimensional modelling fit in?

Data Modelling – Back to the Future?

- Data Modelling didn't start with relational! This may be a surprise to many people, but the first uses of data models were well before Relational data bases became the norm. The techniques are applicable to many of the modern non-relational formats we see today.
- Modelling in the pre-relational days. We didn't have RDBMS's. We had Flat files, Sequential, VSAM, Hierarchical DBMS's, Network DBMS's, Inverted Architecture DBMS's.
- The techniques that were developed for these are directly appropriate to the NoSQL and Big Data world of today.

Data Modelling for Big Data & NoSQL

- What has to change when we are developing data models for a Hadoop or other Big Data environment?
- Do modelling tools support Big Data technologies, what are the restrictions and considerations?
- What data modelling techniques are applicable when targeting a Big Data platform?
- Does normalisation still have a place in the Big Data world?
- Where's our metadata in the model now?
- In the age of big data, popular data modeling tools (eg ER/Studio, ERWin, PowerDesigner) continue to help

us analyze and understand our data architectures by applying hybrid data modelling concepts. Instead of creating pure a relational data model, we now can embed NoSQL submodels within a relational data model. In general, data size and performance bottlenecks are the factors that help us decide which data goes to the NoSQL system.

- Key Value Pairs: A common misconception is that using data structures like JavaScript Object Notation (JSON) prevents us from needing a data model; THIS IS WRONG. We'll show several examples & conclude that a set of JSON files can be just as complicated as a 100 table 3rd Normal Form data model.
- NoSQL & Hadoop: How the 4 types of NoSQL databases still need data models, and how the ACID vs BASE paradigm affects this.

Modelling for Hierarchic Systems & XML

- What must change when developing data models for XML & Hierarchic systems?

Services Oriented Architecture (SOA)

- Why data models are essential for success.

Massively Denormalised Files

- Is modelling needed?
- How do we create data models for Data lakes?

Dimensional Data Models

- How do we create a dimensional model?
- Converting an ER model to Dimensional.
- Slowly changing dimensions, what types and when are they applicable.
- Beyond the basics with conformed dimensions, bridges, junk dimensions & fact less facts.

Application Packages & Data Models

- Do we need to develop data models when implementing a COTS package?
- Uses and benefits.

Using Data Models for Data Integration & Lineage

- How to exploit data models for design of data integration approaches and in data lineage.

Top Down Requirements Capture

- When is it appropriate
- What are the limitations.

Bottom Up Requirements Synthesis

- When this works, where is it appropriate.
- How do we cope with existing DBMS's and systems.

How to Capture Requirements for Both Data and Process Needs

- What comes first Data or Process – we'll show the answer.
- The critical importance of understanding processes to get your data models right (and vice versa).
- Interaction between process and data models.
- Approaches for capturing Process AND Data Requirements.

Checking the Data vs the MetaData; Why Does it Matter?

Use of Standard Data Model Constructs and Pattern Models

- Understanding the Bill of materials (BOM) construct. Where can it be applied, why it's one of the most powerful modelling constructs.
- Party; Role; Relationship: Why mastering this construct can provide phenomenal flexibility.
- Mastering Hierarchies: Different approaches for modelling hierarchies.

Different Data Modelling Notations & a Comparison Between Them

Normalisation

- Progressing beyond 3NF, 4NF, 5NF Boyce-Codd, and why, and when to use them

Presenter

Chris Bradley has spent 37 years in the forefront of the Information Management field, working for International organisations in Information Management Strategy, Data Governance, Data Quality, Information Assurance, Master Data Management, Metadata Management, Data Warehouse and Business Intelligence. He advises clients including National Grid, EDP, BP, Enterprise Oil, Saudi Aramco, Shell, Statoil, TOTAL, Qatar Gas, Alba Leasing, Alinma Bank, American Express, ANZ, Bank of England, Celgene, Cigna Insurance, Emirates NBD, GSK, HSBC, NAB, SABB and Riyad Bank. Chris is Director of the E&P standards committee "DMBoard", an author of several books including "Data Modelling for The Business" and "DMBoK 2.0", a member of the Meta Data Professionals Organisation (MPO) a Fellow of BCS and DAMA CDMP, recipient of the DAMA Lifetime Achievement Award for Data Management Excellence, and author of significant parts of professional certifications. Chris is an acknowledged thought leader in Data Modelling and Data Governance, author of several papers and books including "Data Modelling for the Business".

Audience

- Business Intelligence & Data Warehouse Developers & Architects
- Data Modellers
- Developers
- Data Architects
- Data Analysts
- Enterprise Architects
- Solution Architects
- Application Architects
- Information Architects
- Business Analysts
- Database Administrators
- Project / Programme Managers
- IT Consultants
- Data Governance Managers
- Data Quality Managers
- Information Quality Practitioners

In-House Training: This course is available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

Presenter

Danette McGilvray is an experienced trainer, consultant and author of Executing Data Quality Projects: Ten Steps to

Quality Data and Trusted Information™. An internationally respected expert, her Ten Steps™ approach to information quality has been embraced as a proven method for creating, improving, and managing the quality of all types of data for any kind of organization. Her book is used as a textbook in university graduate programs.

"Danette McGilvray is very inspirational"

Radhia Ghanem, Data Quality Analyst, NHS PS, UK

"Very easy to follow and apply to the work/challenges that I am going to face. Danette was great at using every day experiences and relating them to data quality. A great presenter who is open to new ideas irrespective of being in Data Quality for over 20 years."

Naomi Thomas, Data Quality Analyst, Gocompare.com

"The course has helped me put into perspective and break down the areas of data quality that should fall under investigation in any project - the steps methodology ensures you have captured all the areas that affect data quality completely."

Eirini Basta, Local Data Steward, Business Systems, HEINEKEN UK

Overview

Simply put, information quality is providing the correct set of accurate information, at the correct time and place, to the correct people. However, ensuring quality information is far from simple. Whether you are just starting a project or are already in production, it is not unusual to find that data quality issues prevent organizations from realizing the full benefit of their investments in business processes and systems.

The Ten Steps to Data Quality course teaches a practical approach to creating, improving, and managing the quality of information critical to providing products and services, satisfying customers, and achieving goals for any type of organization. If you are working on real data quality-related issues that need real results, this is the course for you. What is learned applies to all kinds of data and every type of organization – for-profit businesses of all sizes, education, government, healthcare, and nonprofit – because all depend on trusted information to succeed.

Both concepts and practical application are included. Concepts provide a foundation for understanding data quality. Concepts are put into action through the Ten Steps™ process. Both are needed to apply the methodology appropriately to the many data quality related situations that attendees will face within their organizations. In addition to discussion and exercises (individual and as a group), attendees will practice what is learned by applying the steps and techniques to a course project of their choice.

Come with your particular needs in mind, be ready to participate, practice applying what is learned to your situation and leave with realistic methods for managing data quality.

Learning Objectives

- Turn data quality challenges into actionable projects with clear objectives
- Connect data quality issues to business priorities
- Understand concepts that are fundamental to data quality management, (for example, the Framework for Information Quality, information life cycle, data quality dimensions, business impact techniques, root cause analysis)
- Choose the appropriate steps/activities from the Ten Steps™ process to address business needs
- See how other data management topics such as data governance, data modeling, metadata, business rules, master data, reference data, and data standards fit into the process for ensuring high quality data

Course Outline

The Data and Information Quality Challenge

- Information and data quality defined
- Why we care about data quality
- Data quality in action through programs, projects, and operational processes
- The Ten Steps™ methodology – key concepts plus the Ten Steps™ process

Key Concepts – A Necessary Foundation for Understanding Information Quality

- Framework for Information Quality (FIQ) – Components that impact information quality:
 - Business Needs - Goals, Strategies, Issues, Opportunities
 - Information Life Cycle (POSIMAD – Plan, Obtain, Store and Share, Maintain, Apply, Dispose)
 - Key Components that affect information quality (Data, Processes, People/Organizations, Technology)
 - Interaction between the Information Life Cycle and the Key Components
 - Location (Where) and Time (When and How Long)
 - Broad-Impact Components (RRISC – Requirements and Constraints, Responsibility, Improvement and Prevention, Structure and Meaning, Communication, Change)
- The relationship between Data Governance, Stewardship, and Data Quality

Step-by-Step: The Ten Steps™ Process

- Each of the Ten Steps is covered in the seminar with instructions, techniques, examples, templates and best practices.
- Data quality tools will also be discussed in the applicable steps.
- Exercises and working on a course project with small teams give attendees the opportunity to practice what is learned.

Step 1 Determine Business Need and Approach

- Define and agree on the issue, the opportunity, or the goal to guide all work done throughout the project.
- Refer to the business need throughout the other steps in order to keep the goal(s) at the forefront of all activities

Step 2 Analyze Information Environment

- Gather, compile, and analyze information about the current situation and the information environment.
- Document and verify the information life cycle, which provides a basis for future steps, ensures that relevant data are being

- assessed, and helps discover root causes
- Design the data capture and assessment plan

Step 3 Assess Data Quality

- Evaluate data quality for the data quality dimensions applicable to the issue
- Results of assessments provide a basis for future steps, such as identifying root causes and determining needed improvements and data corrections
- Overview of all the dimensions of data quality and how to choose which dimensions will best support business needs

Step 4 Assess Business Impact

- Determine the impact of poor-quality data on the business using a variety of qualitative and quantitative techniques.
- This step provides input to establish the business case for improvement, to gain support for information quality, and to determine appropriate investments in your information resource

Step 5 Identify Root Causes

- Identify and prioritize the true causes of the data quality problems.
- Develop specific recommendations for addressing the problems.

Step 6 Develop Improvement Plans

- Finalize specific recommendations for action.
- Develop improvement plans based on the recommendations.
- Establish ownership for implementation.

Step 7 Prevent Future Data Errors

- Implement solutions that address the root causes of the data quality problems.

Step 8 Correct Current Data Errors

- Implement steps to make appropriate data corrections.

Step 9 Implement Controls

- Monitor and verify the improvements that were implemented
- Maintain improved results by standardizing, documenting, and monitoring appropriate improvements

Step 10 Communicate Actions and Results

- Document and communicate the outcome of quality tests, improvements made, and results of those improvements.
- Communication is so important that it is part of every step

Audience

Individual contributors and team members responsible for or interested in the quality of data in their business processes, systems, or databases. This includes those in roles such as:

- Data Analysts
- Data Quality Analysts
- Business Analysts
- Data Designers/Modellers
- Data Stewards (Business and Technical)
- Application Developers

IRM UK In-House Training

IRM UK is a leading provider of strategic Business and IT Training for Business and IT Management. We provide in-house training, public courses and conferences in the areas of:

- **Enterprise Architecture & Strategy**
- **Business Change & Transformation**
- **Business Analysis**
- **Enterprise Data & Business Intelligence**

Running a course in-house gives you the following benefits:

- Tailor the course to your organisation's specific needs
- Case studies and problem solving will be about your organisation - the course presenter is, in fact, your consultant for the day
- Train a large group of people without having to pay for their travel and living expenses
- You can decide when you need and want the course to be presented
- You can receive vital training without having to leave your office
- Cost savings for multiple delegates, compared to using public courses

available on-site. E-mail customerservice@irmuk.co.uk with your enquiries.

'The opportunity to meet and talk to people from different industries was invaluable.'

Deanne Earle, Principal Consultant, Unlike Before

IRM UK Business Change & Transformation Conference

18-20 March 2019, London

'Great! Very inspirational, Will come next Year. Will recommend it.'

Maria Laveron, Head of Processes and Tools, Euroflight GMBH

"Superb conference. Will go back filled with great ideas. Where to start though?"

Michael Sheahan, BI Manager, IKEA Service BV

IRM UK Master Data Management Summit & Data Governance Conference

13-16 May 2019, London

"High quality event with top speakers and topics. A perfect mix between MDM and Data Governance Status and trends."

Galand Vincent, Senior Business Analyst, ING Belgium

"This is really a great event to share ideas and learn from the industry. I will definitely come to the next one!"

Isha Jain, BA Best Practice & Standards Lead, National Grid

Business Analysis Conference

23-25 September 2019, London

"So glad I got the opportunity to attend. Brilliant to meet so many people in the same profession and to learn from them."

Annette O'Donovan, Senior Business Analyst, Genworth

"There's a reason why people keep coming back year after year – great conference (as always)."

Terje Bremnes, Enterprise Architect, Helse Vest, Norway

IRM UK Enterprise Architecture & Business Process Management Conference

21-24 October 2019, London

"Possibly the best conference I've ever attended for the insights and ideas it has provided."

Philip Ainsworth, Business Architect, Student Loans Company

"Great conference, the best event in Data Management! Excellent speakers and very interesting content."

Ana Teresa Szmoes, Caixa Geral de Depósitos

IRM UK Enterprise Data and Business Intelligence & Analytics Conference Europe

18-21 November 2019, London

"This event never fails to enable me to connect with people who I can learn from and who can re-energise me in Data Management."

Andy Moore, Process Specialist, Information, Rolls-Royce

IRM UK is a leading provider of strategic Business and IT Training for Business and IT Management. We provide courses and conferences on Enterprise Architecture and Strategy, Business Analysis and Enterprise Data Management. We have a wide range of speakers, many of whom are leading figures in their fields. Our events are condensed and rigorous combining technical explanations with management advice and discussions of future directions.

Registration Information:

Full payment or a purchase order is due prior to the event. Payment may be made in Sterling (£) or Euros (€). If paying in Euros the prevailing exchange rate of the country of the delegate or delegates' company is to be used. The total Euros remitted should be the amount required to purchase the sterling pound cost of the event on the day of payment. All delegates must add VAT (20%) to their total event fees. VAT may be reclaimed by delegates from the tax authorities after the event.

The registration fee includes the lectures, documentation, refreshment breaks and lunch on each day of the event. The cost of hotel accommodation is not included in the event fee.

2 days	£1,295 + VAT (£259)	£1,554
3 days	£1,595 + VAT (£319)	£1,914
4 days	£1,995 + VAT (£399)	£2,394

Group Booking Discounts:

2-3 delegates 10% • 4-5 delegates 20% • 6+ delegates 25%

Multiple Seminar Discounts:

Attend more than one of our courses and you will be entitled to the following discounts:

2nd course 10%
3rd course 15%
4th course 20%
5th course 25%

Only one discount can be applied at any one time.
